New in this release

- **Wireless enterprise activation:** You can activate your handheld over the wireless network, without connecting to your computer.
- **Wireless PIM synchronization:** You can synchronize all organizer and email information (including meeting requests, memos, tasks, read/unread status, sent items, and filing of messages) over the wireless network.
- **Wireless email settings:** You can set and manage your out-of-office auto-reply, change email filters, and update your auto-signature over the wireless network.
- **Automatic wireless backup:** Your handheld settings, such as icon positions, font settings, and browser bookmarks, are backed up over the wireless network automatically.
- **Wireless encryption key regeneration:** You can regenerate encryption keys directly from your handheld.
- **Sent item synchronization:** Messages sent from your email client can now be sent to the Sent Items folder on your handheld.
- **Always displaying Reconcile Now:** You can reconcile your email messages between your handheld and your computer, even if no changes have been made on the handheld.

Fixed issues

- Previously, when you attempted to run a third-party application, incompatibility issues might have caused the user interface to stop responding and your handheld might have reset.
Issue No.: SDR42654

Known issues

- If you back up your profiles from a Java-based BlackBerry Wireless Handheld to a C++-based BlackBerry Wireless Handheld, and then edit a profile and save your changes, the changes are not saved.
Impact: You cannot restore the profiles database in a backup from a Java-based handheld to your C++-based handheld.
Workaround: After restoring your handheld data, clear the profiles database using the dekstop software. See the *Backup and Restore Online Help* for more information on clearing databases.
Issue No.: SDR41935
- If you cancel Enterprise Activation on your handheld before it completes, and then you activate your handheld again, permitting the process to complete, the Wireless Synchronization field in the calendar options is set to No.
Impact: Your handheld calendar is not enabled for wireless synchronization.
Workaround: In the calendar options, set the **Wireless Sync** field to **Yes**.
Issue No.: SDR37790
